Tech Stack Scout — Components Map

Live engineering intelligence for FlowForge's account executive · Next.js on Vercel · Supabase · Gemini Flash · public APIs

WHO / WHAT STARTS IT

Nikhil (AE)
Opens the public Vercel URL
Researches companies, reads reports, copies opening lines

Vercel Cron
Daily 03:00 UTC
Refreshes companies older than 6 days → weekly per account

VERCEL · NEXT.JS 16 APP ROUTER (SERVER-SIDE SECRETS ONLY)

Dashboard UI
- New research with company auto-suggest
- Watchlist: fit views, insights dropdowns
- Company report: Overview · Evidence · Fit score · History
- Left sidebar navigation, live status

app/page.js · app/watchlist · app/company/[id]

Server actions
- Add / remove / restore company (validated)
- Refresh now (10-min cooldown)
- Edit · Rewrite · Rewrite with note · Restore version (never edits evidence)
- Outreach status

app/actions.js · research starts via after()

after()

API routes
/api/refresh · CRON_SECRET, batched, 150 s budget
/api/suggest · company name → website
/api/companies · read-only JSON

Read layer
lib/data.js: watchlist, report, evidence, versions, refresh runs, metrics
lib/supabaseAdmin.js · secret key, server only

Research pipeline — per company (lib/refresh.js)

1 **Collect** — GitHub, job boards, web in parallel
2 **Verify** — Evidence records, tiers, confidence, freshness, gaps
3 **Score** — Fit 0–100 in code; no strong evidence = not scored
4 **Write** — Gemini Flash: 2 paragraphs + line, cites evidence IDs
5 **Check** — Line cites strong evidence; no unsupported tools
6 **Save** — Keep last good data if a source fails; log run

LIVE PUBLIC SOURCES (NO SCRAPING)

GitHub REST API
Repos, languages, topics, CI workflows, push activity · token, 5,000 req/h · Tier 1

Greenhouse · Lever · Ashby
Official job posts: engineering roles and the tools they list · public APIs, no key · Tier 1

Gemini Flash (@google/genai)
Google Search grounding: blogs, talks, docs with real source URLs · structured JSON for summary, opening line, rewrites
The only AI in the system · no Claude API

Clearbit autocomplete · Wikidata
Company name → website suggestions
(Wikidata official website as fallback)

pages read via lib/data.js · server actions write the watchlist

writes evidence, report, versions, run log

SUPABASE · POSTGRES · ROW-LEVEL SECURITY ON · ACCESSED ONLY FROM THE SERVER

companies
Watchlist: name, website, GitHub, job board, active, research status, outreach status

evidence
One row per finding: claim, source URL, type, tier, dates, status, confidence, freshness, caveat

company_intel
Latest profile and report: summary, opening line, cited evidence, gaps, fit, last good refresh

report_versions
Every generated, rewritten, edited and restored summary / line

refresh_runs
Job log: trigger, status, attempted / succeeded / failed / deferred, errors

intel_history
Weekly snapshots for "what changed since last week"

product_profile
FlowForge targets: languages, clouds, runtimes, roles — drives the score

LEGEND

User flow · Scheduled weekly refresh · Call to a live public source · Database read / write

Rules: facts come from live APIs · confidence, freshness and the fit score are computed in code · Gemini Flash only writes text from cited evidence · unknowns are shown as research gaps, never guessed · a failed source never erases the last good research · nothing is ever sent to the prospect.
